UX Feedback Report

Issue Record

Version	Date	Notes
0.1	19/5/21	First draft

Table of Contents

Received feedback

Feature/page:	User 1 (6/10)	User 2 (6/10)
Home page	Empty, thought they needed to wait on something to load still	Empty, logo would be nice in the center
Nav bar	(when logged in as user) nav bar has 3 buttons that don't show anything	-
Register page	Inputs are all in one line and there is no confirmation if it worked or even did anything	Email before username and password, also maybe a confirm password , add redirect to login and or empty text boxes
Login page	Simple, why have forget password if it doesn't lead to anything	-
Profile	-	User doesn't care what role they have or what their id is
Users list	No way to order the users alphabetically	Edit is fine, but have a prompt for deleting yourself
Edit user	Text boxes are stretched across the entire page and labels are in different places for each input	Admin shouldnt be able to change the password. Editing yourself doesn't change details locally, only relogging in works.
Roles list	Simple list	No option to add, why do i need to see the roles if i know im admin and everyone else is user
Playlists	No way to see playlists	No way to make new playlists besides manually typing in the link, created playlists

Steps to be taken

Based on the feedback above, during the 5th sprint I will take the following steps to improve the user experience:

1. Add something to the home page so it's not a blank white page.
2. Either remove navbar buttons that don't lead anywhere or finish the page it should bring you to
3. Tidy up the register page and have it redirect to either the login page or automatically login and redirect to the profile page.
4. Create a forgot password feature using the user's email
5. Remove the role and user id from the profile page
6. Add a prompt when trying to delete users/yourself
7. Try to implement sorting in the users table
8. Fix the styles on the edit user page and relog the user in so that the details are refreshed
9. Implement the existing add and update methods for roles in the backend as actions in the roles page
10. Make the add playlist page accessible without having to manually type the link
11. Finish the "My playlists" page to show users their own playlists and the "Browse Playlists" page so users can browse other playlists
